Classwork: Hello React

Monday, November 17, 2025   2:29 PM

Instruction:

- Create a new React + Vite project
  pnpm create vite@latest hello-react --template react
- Quite pnpm or open new teminal
- Modify index.css, remove everything and apply this CSS:

```css
body {
  margin: 0;
  background-color: lightgrey;
  display: flex;
  justify-content: center;
  align-items: center;
  min-height: 100vh;
}
```

- Modify App.css, remove everything and apply this CSS:

```css
.card {
  margin-top: 10px;
  background-color: white;
  width: 200px;
  min-height: 200px;
  border-radius: 8px;
  display: flex;
  justify-content: center;
  align-items: center;
}
```

- Modify App.jsx, modify the file to look like this:

```jsx
import { useState } from 'react'
import reactLogo from './assets/react.svg'
import viteLogo from '/vite.svg'
import './App.css'
function App() {

  return (
    <>
      <div className='card'>
        Hello React
      </div>
    </>
  )
}
export default App
```

- Run the pnpm as (of if you not stop it, do nothing)
  pnpm start dev
- Open the URL on browser

Expected Result:

Push to GitHub repository:

- Create a new repository on GitHub named "hello-react" as Public **without** Readme
- Goto your project directory and run:
  git init
- Follow the GitHub first push instructions to push your project
